Curry-Howard From The Ground Up

Michael Arntzenius

July 31, 2014

What's this talk about?

- 1. A simple formal logic (natural deduction)
- 2. A simple programming language (λ -calculus)
- 3. How they're secretly the same thing!!
- 4. Where is this relevant?

What's formal logic?

Inference rules

$$\frac{premise_1 \quad premise_2 \quad \cdots \quad premise_n}{conclusion} \text{ RuleName}$$

If premise₁, premise₂, ..., and premise_n,
then conclusion,
by rule RuleName.

Defining inference rules

$$\frac{a < b \quad b < c}{a < c}$$
 transitivity

This defines a rule of inference called transitivity.

Using inference rules to prove things

$$\frac{a < b \quad b < c}{a < c}$$
 transitivity

Suppose we know that a < b, b < c, and c < d. We'd like to **prove** that a < d using our transitivity rule.

Using inference rules to prove things

$$\frac{a < b \quad b < c}{a < c}$$
 transitivity

Suppose we know that a < b, b < c, and c < d. We'd like to **prove** that a < d using our transitivity rule.

$$\frac{assumed)}{a < b} \frac{b < c \quad c < d}{b < d} \text{ transitivity}$$

$$\frac{a < b}{a < d} \text{ transitivity}$$

Connective	Meaning	
$A \wedge B$	"A and B"	
$A\supset B$	"A implies B ", or "given A then B "	
$A \vee B$	"A or B (and I know which one)"	
$\neg A$	"not A" or "refutation of A"	

$$\frac{A \quad B}{A \wedge B} \wedge I$$

$$\frac{\textit{A} \quad \textit{B}}{\textit{A} \land \textit{B}} \land \textbf{I} \qquad \frac{\textit{A} \land \textit{B}}{\textit{A}} \land \textbf{E}_1$$

$$\frac{A \quad B}{A \wedge B} \wedge \textbf{I} \qquad \frac{A \wedge B}{A} \wedge \textbf{E}_1 \qquad \frac{A \wedge B}{B} \wedge \textbf{E}_2$$

$$\frac{A \quad B}{A \land B} \land I \qquad \frac{A \land B}{A} \land E_1 \qquad \frac{A \land B}{B} \land E_2$$

$$\frac{A \wedge (B \wedge C)}{\frac{B \wedge C}{B} \wedge E_1} \wedge E_2$$

$$\frac{A \quad B}{A \land B} \land I \qquad \frac{A \land B}{A} \land E_1 \qquad \frac{A \land B}{B} \land E_2$$

$$\frac{A \wedge \left(B \wedge C\right)}{\frac{B \wedge C}{B} \wedge E_1} \wedge E_2 \qquad \frac{A \wedge A}{A \wedge A} \wedge I$$

$$\frac{A \quad B}{A \land B} \land I \qquad \frac{A \land B}{A} \land E_1 \qquad \frac{A \land B}{B} \land E_2$$

$$\frac{A \wedge \left(B \wedge C\right)}{\frac{B \wedge C}{B} \wedge E_{1}} \wedge E_{2} \qquad \stackrel{\textit{(assumed)}}{\underbrace{A \wedge A} \wedge A} \wedge I \qquad \frac{A \wedge B}{\underbrace{B} \wedge E_{2}} \wedge E_{2} \stackrel{\textit{(assumed)}}{\underbrace{C} \wedge I}$$

$$\frac{A \quad B}{A \land B} \land I \qquad \frac{A \land B}{A} \land E_1 \qquad \frac{A \land B}{B} \land E_2$$

$$\frac{???}{A\supset B}\supset I \qquad \frac{A\supset B\quad A}{B}\supset E$$

A simple logic: \supset : example proof (1)

Let's try to prove C given A, B, and $(A \land B) \supset C$:

$$\frac{???}{A\supset B}\supset I \qquad \frac{A\supset B\quad A}{B}\supset E$$

A simple logic: \supset : example proof (1)

Let's try to prove C given A, B, and $(A \land B) \supset C$:

$$\underbrace{ \frac{(\textit{assumed})}{(\textit{A} \land \textit{B}) \supset \textit{C}} \underbrace{\frac{A}{A} \underbrace{\frac{\textit{B}}{B}}_{\textit{A} \land \textit{B}} \land \textbf{I}}_{\textit{C}}$$

$$\frac{???}{A\supset B}\supset I$$
 $\frac{A\supset B}{B}\supset E$

$$\frac{???}{A\supset B}\supset I \qquad \frac{A\supset B\quad A}{B}\supset E$$

$$\begin{array}{c}
A \\
\vdots \\
\frac{B}{A \supset B} \supset I \qquad \frac{A \supset B \quad A}{B} \supset E
\end{array}$$

$$\begin{array}{c}
\overline{A} \\
\overline{A} \\
\overline{B} \\
\overline{A \supset B} \supset I_{x}
\end{array}
\qquad
\begin{array}{c}
\overline{A \supset B} \quad A \\
\overline{B} \\
\overline{B} \\
\end{array} \supset E$$

A simple logic: \supset : example proof (2)

Let's try to prove, given $A \supset B$, that $A \supset (A \land B)$:

$$\begin{array}{ccc}
\overline{A} & & \\
\vdots & & \\
\overline{B} & \supset I_{x} & & \overline{A} \supset B & A \\
\overline{B} & & B &
\end{array} \supset E$$

A simple logic: \supset : example proof (2)

Let's try to prove, given $A \supset B$, that $A \supset (A \land B)$:

$$\frac{A \rightarrow B \qquad A}{A \land B} \rightarrow I_{X}$$

$$\frac{A \land B}{A \supset (A \land B)} \supset I_{X}$$

$$\begin{array}{ccc}

A simple logic (all together now)

$$\begin{array}{cccc} \frac{A & B}{A \wedge B} \wedge I & \frac{A \wedge B}{A} \wedge E_1 & \frac{A \wedge B}{B} \wedge E_2 \\ & & \\ A & & \vdots \\ & \frac{B}{A \supset B} \supset I_x & \frac{A \supset B \quad A}{B} \supset E \end{array}$$

A simple programming language $(\lambda$ -calculus)

A simple λ -calculus

Syntax	What is it?	in Python
$\lambda x.a$	Anonymous function	lambda x: a
a b	Function application	a(b)
$\langle a, b angle$	Make a pair	(a,b)
π_1 a	First element of pair	a[0]
$\pi_2 a$	Second element of pair	a[1]

What does $\pi_1(\lambda x.x)$ do?

In Python: (lambda x: x)[0]

A simple λ -calculus: types

Type	What is it?	in Haskell
$A \rightarrow B$	Functions from A to B	A -> B
$A \times B$	Pairs of As and Bs	(A,B)

How do I know what type an expression has?

How do I know what type an expression has?

Maybe we can we use inference rules!

A simple λ -calculus: typing rules

A simple λ -calculus: typing rules

$$\frac{a:A\quad b:B}{\langle a,b \rangle:A \times B}$$
 pair

$$\frac{a:A \quad b:B}{\langle a,b\rangle:A\times B} \text{ pair } \frac{a:A\times B}{\pi_1 \, a:A} \text{ proj}_1 \qquad \frac{a:A\times B}{\pi_2 \, a:B} \text{ proj}_2$$

$$\frac{a:A \quad b:B}{\langle a,b\rangle:A\times B} \text{ pair } \qquad \frac{a:A\times B}{\pi_1\,a:A} \text{ proj}_1 \qquad \frac{a:A\times B}{\pi_2\,a:B} \text{ proj}_2$$

$$\frac{f:A\to B\quad a:A}{fa:B}$$
 app

$$\frac{a:A \quad b:B}{\langle a,b\rangle:A\times B} \text{ pair } \frac{a:A\times B}{\pi_1 a:A} \text{ proj}_1 \qquad \frac{a:A\times B}{\pi_2 a:B} \text{ proj}_2$$

$$x:A$$

$$\vdots$$

$$\frac{f:A\to B \quad a:A}{fa:B} \text{ app } \frac{b:B}{\lambda x.b:A\to B} \text{ lam}$$

$$\frac{A \quad B}{A \times B} \text{ pair } \frac{A \times B}{A} \text{ proj}_{1} \qquad \frac{A \times B}{B} \text{ proj}_{2}$$

$$\frac{A}{A \times B} \text{ pair } \frac{A}{A} \text{ proj}_{1} \qquad \frac{A}{B} \text{ proj}_{2}$$

$$\vdots$$

$$\frac{A}{A \to B} \qquad A \text{ app } \frac{B}{A \to B} \text{ lam}$$

$$\frac{A \quad B}{A \wedge B} \wedge I \quad \frac{A \wedge B}{A} \wedge E_{1} \quad \frac{A \wedge B}{B} \wedge E_{2}$$

$$\frac{A}{A \cap B} \wedge I \quad \frac{A}{A} \wedge E_{1} \quad \frac{A}{B} \wedge E_{2}$$

$$\frac{A}{B} \wedge E_{2} \quad \frac{A}{B} \wedge E_{2}$$

$$\frac{A}{B} \wedge E_{2} \quad \frac{A}{B} \wedge E_{2}$$

$$\frac{A}{B} \wedge E_{2} \quad \frac{B}{B} \wedge E_{2}$$

Our programming language was a logic in disguise!

Our programming language was a logic in disguise! ... are expressions proofs in disguise?

Curry-Howard: programs as proofs

Here's a simple proof:

$$\frac{\stackrel{\textit{(assumed)}}{A \wedge B} \wedge E_2}{\stackrel{\textit{(B)}}{B} \wedge A} \wedge E_1$$

This shows that \wedge is commutative.

Curry-Howard: programs as proofs

Here's a simple proof program:

$$\frac{\textbf{\textit{a}}: \textbf{\textit{A}} \times \textbf{\textit{B}}}{\frac{\pi_2 \, \textbf{\textit{a}}: \textbf{\textit{B}}}{\langle \pi_2 \, \textbf{\textit{a}}, \pi_1 \, \textbf{\textit{a}} \rangle}} \operatorname{proj}_2 \quad \frac{\textbf{\textit{a}}: \textbf{\textit{A}} \times \textbf{\textit{B}}}{\pi_1 \, \textbf{\textit{a}}: \textbf{\textit{A}}} \operatorname{proj}_1 \\ \frac{\langle \pi_2 \, \textbf{\textit{a}}, \pi_1 \, \textbf{\textit{a}} \rangle: \textbf{\textit{B}} \times \textbf{\textit{A}}}{\langle \pi_2 \, \textbf{\textit{a}}, \pi_1 \, \textbf{\textit{a}} \rangle: \textbf{\textit{B}} \times \textbf{\textit{A}}} \operatorname{pair}$$

In Python: (a[1], a[0]). This swaps a pair.

Commutativity of ∧
=
Swapping a pair!

What have we just learned?

We have found a bridge between logic and programming languages.

What use is this?

- ▶ Prove theorems by writing code: Coq, Agda, Idris, ...
- Prove theorems about programming: can apply a hundred years of work in formal logic!
- Serendipity: Take a thing in {logic,PL}, ask "what does this mean in {PL,logic}?"
- Design of programming language features

Serendipity

What logical concepts have meaning in programming-land?

- ► Connectives: ∨, ¬, ∀, ∃, ...
- Properties: Constructivity, consistency, ...
- Systems: Modal logic, linear logic, ...

What PL concepts have meaning in logic-land?

► **Evaluation**, Turing-completeness, laziness, mutation, subtyping, exceptions, monads, ...

Read " $a \mapsto b$ " as "a steps to b" or "whenever you see a, you can replace it with b".

Rule	in Python
$\pi_1\langle a,b\rangle\mapsto a$	(a,b)[0] evaluates to a
$\pi_2\left\langle a,b ight angle \mapsto b$	(a,b)[1] evaluates to b

Read " $a \mapsto b$ " as "a steps to b" or "whenever you see a, you can replace it with b".

Rule	in Python
$\pi_1\langle a,b\rangle\mapsto a$	(a,b)[0] evaluates to a
$\pi_2\left\langle a,b ight angle \mapsto b$	(a,b)[1] evaluates to b
$(\lambda x.a) b \mapsto [b/x] a$	

[b/x] a means "substitute b for x in a".

Read " $a \mapsto b$ " as "a steps to b" or "whenever you see a, you can replace it with b".

Rule	in Python
$\pi_1\langle a,b\rangle\mapsto a$	(a,b)[0] evaluates to a
$\pi_2\left\langle {a},b \right angle \mapsto b$	(a,b)[1] evaluates to b
$(\lambda x.a)b\mapsto [b/x]a$	(lambda x: a)(b) evaluates to

[b/x] a means "substitute b for x in a".

Read " $a \mapsto b$ " as "a steps to b" or "whenever you see a, you can replace it with b".

Rule	in Python
$\pi_1\langle a,b\rangle\mapsto a$	(a,b)[0] evaluates to a
$\pi_2\left\langle a,b ight angle \mapsto b$	(a,b)[1] evaluates to b
$(\lambda x.a) b \mapsto [b/x] a$	(lambda x: a)(b) evaluates to
· · · · · · · · · · · · · · · ·	well, it's complicated

[b/x] a means "substitute b for x in a".
